Interface Displays & Controls Receives SeaPort-e Subcontract Award

Oceanside, California — August 18, 2005 — Interface Displays & Controls, Inc. (Interface) a certified small, women-owned business, has been awarded a subcontract as a member of the Dayton T. Brown Prime Team for the U.S. Navy's SeaPort Enhanced (SeaPort-e) Rolling Admissions procurement vehicle. The vehicle is worth a total of \$5.3 billion annually. Under the terms of the subcontract, Interface will be able to compete in all seven geographical zones across the United States for services related to weapons systems acquisition and life-cycle support, including research and development support, prototyping, acquisition logistics, modeling, test and evaluation trials, and engineering support.

SeaPort-e was established in 2002 by the Naval Sea Systems Command (NAVSEA) warfare centers as a web-based e-business procurement vehicle that facilitates performance-based service acquisition. SeaPort-e Rolling Admissions expanded the ordering agencies authorized to utilize SeaPort-e to include: NAVSEA; Space and Naval Warfare Systems Command; Naval Air Systems Command; Naval Supply Systems Command; Naval Facilities Engineering Command; United States Marine Corps; Military Sealift Command; and Strategic Systems Program.

For SeaPort-e Rolling Admissions, Interface will join a Dayton T. Brown (www.dtb.com) team of 19 other large and small business partners with a complementary range of capabilities. This experienced team will be able to offer the Navy and Marine Corps a depth of resources and solutions for their mission needs.

“Since 1976, Interface has been committed to providing quality technical display and control products to the Department of Defense (DoD). To that end, we have enjoyed a successful relationship with the DoD and look forward to utilizing the SeaPort-e vehicle to expand our work with the Navy and other military customers,” said Jenifer Thomas, President and CEO of Interface. “We believe that our proven past performance, quality display and control products, and our commitment to innovative solutions will add value to the SeaPort-e team.”

About Interface Displays & Controls, Inc.

Interface has been supplying innovative and reliable products to the military aviation industry for more than twenty-nine years. The company specializes in the design and manufacturing of cockpit controls, display devices, data transfer systems, rugged computing devices, and keyboards for both military and commercial aircraft. All products are available with Night Vision (NVIS) compatible lighting and are useable in applications for aviation, marine, search & rescue, police, surveillance & security, as well as land vehicles and weapon support systems.
