**Interface Displays & Controls Selected by  
Rockwell Collins for FAB-T Program**

**Oceanside, California — September 29, 2005** — Interface Displays & Controls (Interface), a leader in advanced cockpit control technology, was recently selected by Rockwell Collins to supply control panel assemblies that will be integrated into display units to be supplied by Rockwell Collins for airborne and ground communication terminals for the U.S Air Force’s Family of Advanced Beyond Line-of-Sight Terminals (FAB-T) program.

The contract includes the design, development, test and delivery of Engineering, Manufacturing and Development (EMD) units for two control panel configurations. The control panels will include NVIS-compatible LED indicators.

“The selection by Rockwell Collins is a significant win for Interface because it broadens our experience of ground applications” said Frank Mottola, business development manager responsible for Rockwell Collins programs. “This also expands our support of U.S. Air Force programs. Interface currently supplies the cockpit control unit that is an integral part of the aircraft data acquisition and recording system (ADARS) installed on the fleet of KC-135 aircraft. Interface is proud to be part of the Rockwell Collins FAB-T program team.”

**About Interface Displays & Controls, Inc.**

Interface has been supplying innovative and reliable products to the military aviation industry for more than twenty-nine years. The company specializes in the design and manufacturing of cockpit controls, display devices, data transfer systems, rugged computing devices, and keyboards for both military and

commercial aircraft. All products are available with Night Vision (NVIS) compatible lighting and are useable in applications for aviation, marine, search & rescue, police, surveillance & security, as well as land vehicles and weapon support systems.
